PROFESSIONAL EXPERIENCE

Riseup Labs , Software Engineer

02/2024 – Present | Uttara, Dhaka

- Built an AI application using open source models with LangChain and RAG.
- Designed multiple system architecture and databases to ensure high performance across multiple projects including Ride Share and SaaS applications.
- Architected and deployed scalable cloud infrastructure and automated CI/CD pipelines using Jenkins and GitHub Actions to enable reliable, low downtime production releases.
- Managed full lifecycle DevOps processes including containerization, monitoring, and performance optimization.
- Delivered Stripe payments, AI powered summaries, core background processes for a SaaS platform.
- Delivered high quality, reusable code by following Test Driven Development (TDD), while designing and implementing low latency, high availability applications.
- Collaborated on developing a comprehensive ERP solution integrated with an IoT.

Mediusware Limited , Junior Software Engineer

08/2022 – 01/2024 | Mohammadpur, Dhaka

- Successfully completed a highly salable distributed system with 30% increase in system performance.
- Collaborated with cross functional teams to achieve project milestones, closely engaging with frontend and design teams.
- Ensured code quality, collaborated across teams, and embraced continuous learning.
- Developed a multi-tenant application to event management and maintainability.

SKILLS

Programming languages & Frameworks: Python • Node.js • Django • FastAPI • RAG • LangChain • Flask • GraphQL • Wagtail
Scrapy • Django REST Framework • Nest.js • Express.js

Frontend: React • Vue.js • Tailwind CSS

Database: PostgreSQL • MySQL • Redis • Firebase

Others: Docker • CI/CD • Jenkins • Nginx • WebSocket • Selenium

EDUCATION

BSc in Computer Science and Engineering, Green University of Bangladesh

2019 – 2022 | Dhaka, Bangladesh

NOTABLE PROJECTS

Trainr (X-NOR)  , DRF, Next.js, Tailwind CSS, PostgreSQL, Docker, Redis, Stripe.

Contributed this SaaS based gym platform by implementing Stripe payments, personalized summaries with the OpenAI API customization, and all core background processes across the admin dashboard and mobile app.

CardiCheck, Python, Django Rest Framework, Redis, Celery, Tailwind CSS, and React.

CardiCheck is an advanced hospital system for streamlining patient care and administrative tasks. I especially developed seamless appointment scheduling, direct prescription services, messages, and video calling systems.

Nexivent  , GraphQL, Django, MySQL, and Django_q, Firebase, Multi-tenant.

Created a multi-tenant platform for events management with separate domains alongside databases. Empowering organizations to host and manage their unique events seamlessly with its flexible framework which I have done.

ADDITIONAL INFORMATION

- Strong problem-solving skills with an ability to quickly grasp new technologies.
- Developed a popular npm package for debugging nest.js applications **nest-debug-panel** 
- Passionate about learning and keeping up with industry trends.
- I have contributed to government and international projects on an organizational basis.
- I have solid foundation professional system design and database design also deployments.
